**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6 and 48-53, drawn to a method and system for recording data transmitted to a storage system including the feature flushing data from the cache, classified in class 711, subclass 135 [Storage Accessing and Control - Cache flushing].
  - II. Claims 7-21 and 54-68, drawn to a method and system for recording data transmitted to a storage system including the feature inserting a marker into the cache, classified in class 711, subclass 144 [Storage Accessing and Control - Cache status data bit].
  - III. Claims 22-47 and 69-94, drawn to a method and system for recording data generated by a client server, and a system for recording data stored in a storage system, including the feature performing a snapshot of the data, classified in class 711, subclass 162 [Storage Accessing and Control - Backup].
2. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Invention Group I has separate utility such as flushing cache data to a storage device; Invention Group II has separate utility such as marking cached data; and Invention Group III has separate utility such as performing a snapshot of data. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
